

WORK EXPERIENCE

- **Ebsens Hotel og Restaurant** Maribo, Lolland, DK
Dishwasher/Kitchen Assistant 08/2023 – 09/2024
 - **Kitchen Operations:** Maintained cleanliness and efficiency in dish washing and basic food preparation.
 - **Teamwork:** Supported my fellow colleagues during busy hours.
- **Let-Køb** Location, Denmark
Shop Assistant 03/2025 – 06/2025
 - **Customer Service:** Helping customers with finding products, offering suggestions, and processing payments.
 - **Inventory Management:** Maintaining stocks in both the store in Kramnitze and the Femern Bælt Tunnel store.
 - **Team Collaboration:** Supported my fellow colleagues during busy hours.

EDUCATION

- **Rødby Søndre Skole** Rødby, DK
Final Grading Average: 11.4 08/2010 - 07/2021
- **HTX-LF - Technical Gymnasium, Lolland-Falster** Nykøbing F., Falster, DK
Math A, Physics A, Chemistry A, and Mechatronics A 08/2021 - 07/2024
- **Technical University of Denmark - Faculty of Engineering** Kongens Lyngby, Copenhagen, DK
B.S. in Design and Innovation — Changed Education 08/2024 - 12/2024
- **University of Southern Denmark - Faculty of Engineering** Sønderborg, Sønderjylland, DK
B.Eng. in Mechatronics 08/2025 - now

PROJECTS

- **Muon Detector — Particle Physics Project — 02/2025 to Present:** Inspired by the Muon Detector in the Department of Particle Physics at the Niels Bohr Institute. I am currently designing and building a geiger-müller based muon detector using custom designed dc-dc-boost converter, signal processing circuitry, and the gap between the tubes can be adjusted to be able to generate rough images alike in muon tomography
- **4-Bit Von Neumann CPU — Embedded Systems — 08/2026 to 08/2026:** Built a custom designed 4-Bit Von Neumann style CPU on a breadboard using CMOS logic ic's that can do basic 4-bit arithmetic operations, logic operations, be programmed in the eeprom and run continuously the same program etc. Finally it can output the result on a 1x8 array of LED's. (Made it a challenge to design, build, order the electronics within 1 week :))
- **E-Ink MP3 Player with Bluetooth — Mechatronics Project — 01/2025 to 03/2025:** Developed a custom ESP-32 based MP3 player with Bluetooth and an E-Ink display, with custom PCB's, vibration-motor and a slideshow based function to display images
- **Greenhouse Automation — Autonomous Embedded Systems — 05/2025 to 07/2025:** Developed an efficient autonomous greenhouse that is able to control temperature, humidity, light control, watering system etc. using various different sensors and an old PC PSU with a step down buck converter. Which has so far been able to yield strawberries, herbs and more.
- **Star Stracker — Astro- and Physics Project — 11/2024 to 02/2025:** Developed a star-tracking device capable of pointing at various celestial objects using an IMU, RTC-module and a bit of patience to calculate and adjust itself using a basic algorithm

CERTIFICATES

- **MATLAB Onramp, MathWorks — Jan. 2025**

SKILLS

- **Languages:** Danish, English, German (Basic Proficiency)
- **Programming:** Arduino C++, C
- **Software:** Arduino IDE, AutoCAD, Microsoft Office 365, Fusion 360, Siemens NX, Visual Studio Code
- **Other:** Technical Drawing, 3D Printing, Teamwork, Problem Solving
